B.S. : Mass Communications
(Electronic Media Production)
Middle Tennessee State University
2004 - 2008

Updated June 2022

PROFILE

I'm a Software Engineer with a passion for finding efficient ways to solve problems. Lately, I've been focusing on web application development + e-commerce. I want to be part of teams that are building excellent products that solve real problems.

EXPERIENCE

Software Engineer, Radio Systems Corporation

Knoxville, TN — 2019 - Present

Create React component library using Storybook for alignment across brands where possible. Utilize Netlify to automate builds and deploys of Gatsby frontend websites. Implement various AWS services to onboard brand acquisitions. Work closely with design team to find opportunities to establish standards for frontend websites and applications. Review pull requests, participate in pair programming, sprint reviews and sprint planning.

Senior Web Developer, Radio Systems Corporation

Knoxville, TN — 2014 - 2019

Work with e-commerce team to keep company web properties operational. Participate in the planning and development of new features, using Agile methodology. Utilize object-oriented PHP with Magento e-commerce framework, front-end development workflows, and CMS knowledge to make customer experiences awesome. Become proficient with various debugging and problem-solving techniques. Take responsibility for production infrastructure (LAMP-stack). Participate in "on-call" rotation with other senior developers.

Web Developer, Metamedia™

Knoxville, TN — 2012 - 2014

Work collaboratively on customer relationship/lead generation software using the Symfony PHP framework, jQuery, and HTML5. Learn and utilize MVC methodology. Perform daily content management tasks using Joomla and WordPress. Develop a small-scale social networking solution for a client. Create documentation for software and processes.

Web Developer, Angel & Associates / Freelance

Knoxville, TN — 2009-2011

Interact with clients to come up with the best solution for their web needs. Design/code websites either from scratch or using WordPress as CMS of choice. Customize code to create admin interfaces that are less confusing/more streamlined. Setup Linux-based servers, testing/staging instances, domain registrations, Google Apps installations, and provide basic IT support for many clients. Work with existing web development companies to create custom PHP scripts and code PSD files into HTML/CSS for WordPress themes.
